**Risk Assessment + Symptom Review**

**Risk Factors for TB:**
- Foreign born person from country with elevated TB rate
- Immunosuppression, current or planned
- Close contact to someone with TB disease at any time
- History of Homelessness
- History of Incarceration

**TB Symptoms:**
- Cough > 2 – 3 weeks
- Fever
- Night Sweats
- Weight Loss
- Hemoptysis

---

**No TB Symptoms**

- **No Risk Factors for TB**
  - No TB Test indicated. Evaluation Complete.

**At Risk for TB** (at least 1 risk factor)

- **TB Test**
  - *:
    - **Negative**
      - No TB Infection. Treatment Not Indicated.
    - **Positive**
      - Chest X-Ray
        - **Normal**
          - TB infection. Candidate for Rx of TB.
        - **Abnormal**
          - Evaluate for Active TB.

---

**TB Symptoms**

- Evaluate for Active TB
  - Chest X-Ray
    - If indicated, sputum AFB smears, cultures, nucleic acid amplification testing
    - A negative IGRA or TST does not rule out active TB disease

---

*Do not repeat testing unless there is a new risk factor(s) since the last negative test. Ongoing homelessness is considered an ongoing risk, so re-testing is appropriate if homelessness is reported within the year after the last TB test.*
